| Pressure:              | D10/D12 800 psi (55 bar)<br>H25 1000 psi (69 bar)                                                                                                                                                                                                                              |
| Hydra-Cell Advantages: | <ul style="list-style-type: none"><li>• Seal-less, leak-free design</li><li>• Minimal, easy maintenance</li><li>• No contact between coolant liquid and drive</li><li>• Can maintain constant pressure</li><li>• Sustained performance</li><li>• Energy cost savings</li></ul> |

## Machining of Diesel Engine Components

As part of major additions to its production facilities in India, a leading Japanese vehicle manufacturer planned a new production line for diesel engine components. Machine tools originally brought in from Japan, or purchased in India for this expansion, incorporated high-pressure coolant delivery systems equipped with piston pumps.

Meanwhile the company searched for alternative pumps that could run reliably for long periods on virtually continuous 24-hour duty. Screw pumps from a German manufacturer and centrifugal pumps from another well-known European supplier were among the options considered.

Discussions with the Hydra-Cell distributor in India on the advantages of a seal-less design alerted plant engineering to features of particular interest to the company: (1) low maintenance; (2) sustainably low power consumption.

Initially replacing two piston pumps and establishing that seal-less Hydra-Cell pumps performed to expectations, the company bought more Hydra-Cell units. All new machine tool coolant systems are now fitted with Hydra-Cell pumps, while additional Hydra-Cell pumps are running in other applications such as auto parts wash.

As of May 2014, more than thirty Hydra-Cell pumps (models D10, H25 and the vertically- mounted D12) are operating on machine tool coolant systems.

### Characteristics of Fluid Pumped:

☒ Contains Abrasives ☐ Corrosive ☐ Solids in Suspension ☐ High-temp. (>158°F/70°C) ☐ Non-lubricating ☐ High-viscosity (>500 cPs)
